The B1 Validation System allows you to create new functionality for the SAP Business One using the B1 Validation Configuration to determine when the functionality should happen and the [Universal Functions](#) to say what kind of functionality should happen.

The B1 Validation System allows you to create new functionality for the SAP Business One using the B1 Validation Configuration to determine when the functionality should happen and the [Universal Functions](#) to say what kind of functionality should happen.

Online E-Learning is also available for this module. [Click here to watch it](#) | [Online Help Center](#)

NB: THE B1 VALIDATION SYSTEM IS INTENDED FOR SUPER-USERS CONSULTANTS AND DEVELOPERS AND IT REQUIRES IN-DEPT. KNOWLEDGE IN THE STRUCTURE OF SAP BUSINESS ONE

Knowledge in the following areas is recommended:

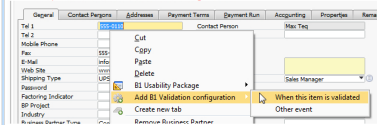

- SAP Business One Form Types and System Information options
- SAP Business One Formatted Searches
- SAP Business One Item Types
- SQL
- Simple development-knowledge
- An understanding of events
- B1 Validation Configuration

Online: [Tips and trick on working with B1 Validation System and how to avoid issues](#)

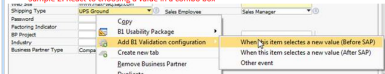

Right-click configuration™

To quickly get going go to the window you wish to add a trigger to, right-click the object you will interact with and choose Add B1 Validation configuration. All depending of the option you will presented with different triggers and option to manipulate existing configurations.

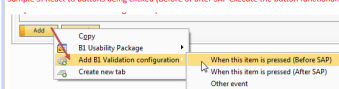

→ Sample 1: Validate entered data when leaving the field

→ Sample 2: React to choosing a value in a combo box

Sample 3: Beart to buttons being clicked (Before or after SAP execute the button functionality)

Choosing an option will send you to the R1 Validation Configuration (You can also manually go there via *Administration > Add-ons > R1 Usability Package > Module Configuration > R1 Validation configuration*.)

In order to use your Universal Function, you need to set the trigger (already defined for you via the right-click configuration) and a condition for it.

BI Validation Configuration (v.120107)

Name: Sort: 100 Number: 122

Users (Empty = All) ☐ Include users ☐ Exclude users

Trigger

FormType:

Item:

Column:

Row:

Menu:

Use: ☐ to target multiple Forms/Items/Menus

FormMode:

Event:

Modifier:

Prevent event looping: ☒

Comments

Category:

Condition

☐ No condition, just execute function

☐ Simple condition

When item 1 (column) Comparison type Value 1 Type (Execute Function) String (S) Equals

☐ SQL Condition

Common SQL structures

#	Condition result	Function to execute
1		Add line

Add line Remove line

☒ Active

Buttons: Cancel OK Import Export

Help: You can use [REVALUATE.STRING] or [REVALUATE.NUMBER] in the SQL condition triggered UP

The configuration window can be divided into 4 parts.

Part	Description																						
Header data = Active and Import/Export	<table border="1"> <thead> <tr> <th>Field</th><th>Description</th></tr> </thead> <tbody> <tr> <td>Number</td><td>This is the auto generated number of the configuration</td></tr> <tr> <td>Name</td><td>This is your name for the configuration for reference</td></tr> <tr> <td>Sort</td><td>The sort-field is used to determine which validation configurations should be used first in case two or more configurations have the same trigger. The configuration with the lowest sort-value will be the configuration that will be executed first.</td></tr> <tr> <td>Users (Empty = All)</td><td> Here you have the option to make the Configuration user-specific. All you need to do is to enter the wanted users (their user codes) separated by ";" (Depending on the user-setting: • Include users = All users entered will use the configuration • Exclude users = All users entered will not use the configuration If you do not enter anything, all users will use the configuration Samples: - Entered: <code>manager;user1;user2</code> (Include users option) • The 3 users with user code "manager", "user1" and "user2" will use the configuration. - Entered: <code>user3</code> (Exclude users option) • All users except user with user code "user3" will use the configuration. </td></tr> <tr> <td>Active</td><td>This checkbox determines if the current configuration is active.
