Configuration

Go to the configuration of the online exchange rates located in **Administration > Add-ons > B1 Usability Package > Module Configurations > Currency Rates: Configuration**

Exchange Rate Configuration (v:2024.00) | 1000250 MSSQL | 109003886

Source: European Central Bank (ECB)

Rounding off decimals: 4

Interval of check: Daily

Fill in indicated days back if missing: 0

Warn if deviation from last rate is above %: 25

Additional Fee: Direct: 0.00000

Additional Fee: Percentage: 0.00000

Days set in the future: 0

Scheduling setup:

Server component (used to be installed and configured)

Success email (Optional):

Error email:

Server run time (24 h/7d) (Daily interval): 1 : 9

Server day in month to run (Monthly interval): 1

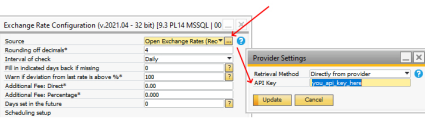

Always update exchange rates even if already filled

Do not set rates on user login (Only Scheduled rates)

Update

Cancel

Get rates now

Field	Description
Source	Here you indicate the source from where you would like to get your exchange rates. Currently the following are supported:
Recommended Sources (The sources we find to be the most reliable and recommend that you use)	
European Central Bank (ECB)	
Open Exchange Rates	https://openexchangerates.org/api/latest.json?api_key=YOUR_API_ID (where YOUR_API_ID is your API key) This rate provider offer 170 different Currencies and is our recommend provider for "non-common" currencies. In order to use it you will need to sign-up for a free API KEY on https://openexchangerates.org/signup/free , and once you have your API Key you need to enter it in the "API Key" button next to the provider selection.
	
See this video on how to sign up and configure	

Paid Sources (aka you will need to have a subscription with the provide before you can use)	
Source	ECB
Oanda (Bid/Ask/Midpoint)	https://www.oanda.com

Other Secondary Sources (Not recommended** - Only use if any of the recommended sources does not fit your needs)	
Source	URL
National Bank of Denmark	https://www.nat.sondanbanken.dk/v1/bv/OM/DataService.svc/CurrencyRates?language=da
Bank Of Israel	https://biel.gov.il/Publishing/GetExchangeRates.aspx?lang=tr-en
Bank of Canada	http://www.bankofcanada.ca/rates/rates.cfm
Czech National Bank	https://www.cnb.cz/cz/financni-trhy/devizy/trh/kurz-devizovych-trhu/kurz-devizovych-trhu/denni_kurz.txt
Nordea	https://www.nordea.fi/maasot/api/v1/lists/currency/electronic/exchange?lang=fi
Reserve Bank Of Australia	http://www.rba.gov.au/tables/cb-exchange-rates.html
Federal Tax administration (Switzerland) (Daily + Monthly)	https://www.estv.ch/estv/tables/estv-estv-cb-exchange-rates.html [NB: From 28th of December 2021, Federal Tax administration does not have a monthly rate URL so instead we use the Daily URL for backward compatibility reasons]
Banco De México	https://www.banxico.org.mx/rscb/rscb-canal-externo/BOC_externo_050 [NB: BE VERY AWARE OF THIS OPTION IF YOU IMPORT MORE THAN ONE CURRENCY SINCE THIS IS A FIXED FEE IN LOCAL CURRENCY]
Banco De Guatemala	https://www.bancomut.gm.gt/variables/ras/ficocambio.aspx?lenguaje=es
Central Bank of Russia	https://www.cbr.ru/currency/ENL.html
Bank of Brazil	https://www4.bcb.gov.br/Download/fechamento/20241207.csv (where last part being the date of the rate in yyyyMMd (above 7th of December 2024))
National Bank of Poland	https://www.cb.gov.pl/currency/ENL.html
HM Revenue & Customs (UK) (Monthly)	https://www.hm-revenue.service.gov.uk/api/exchange-rates/files/monthly-vml-2023-11.xml (where last part being the year/month of the rate in yyyyMM (example = November of 2023))
Banco central de Chile	http://www.bancomut.gm.gt/variables/ras/ficocambio.aspx?lenguaje=es

** = The reason we do not recommend these sources is that they are all part of various bank websites and these banks from experience tend to not care about backward compatibility and stability. -> So we have over the years seen countless changes and errors from these sources, so if you want to offer your customer the best experience, we recommend sticking to the recommended or paid sources.

Rounding decimals *	The online sources typically have exchange rates with 4 decimals, but you can lower this if you like. NB: This feature is not used when using online service scheduling option, due to low usage.
Interval of check	Here you decide if the exchange rates should be imported one month at the time or just one day at the time.
Fill indicated days back if missing	Here you have the option to backtrack the exchange rates if previous days are missing (Weekend and days where add-on was not started). [NB: Please do not set this to high, since it will lower performance].
Warn if deviation from last rate is above % *	Here you can enter a warning system if exchange rates deviate too much. You can set the number of percentage that the rates can deviate without warnings. If a deviation higher than the allowed occur then in the client, you will be prompted if you wish to import rates anyway (in the server-component a too high deviation will always be rejected as there is no human interaction to determine if it is OK or not)
Additional Fee: Direct *	NB: This feature is not used when using online service scheduling option, due to low usage. If you wish to make the exchange rate fee higher than the online source you have the option to add a fixed amount to the rate (Example if currency XXX is 5.5 and Fee is 1.0 the value set in SAP will be 6.5) NB: BE VERY AWARE OF THIS OPTION IF YOU IMPORT MORE THAN ONE CURRENCY SINCE THIS IS A FIXED FEE IN LOCAL CURRENCY
Additional Fee: Percentage *	NB: This feature is not used when using online service scheduling option, due to low usage. This fee is like the direct fee added onto of the online value but as a percentage instead. NB: IF YOU USE BOTH THE DIRECT FEE AND THE PERCENTAGE FEE, THE DIRECT FEE WILL BE ADDED FIRST BEFORE THE PERCENTAGE FEE IS ADDED
Days Set in the Future	NB: This feature is not used when using online service scheduling option, due to low usage. Here you can set number of days you want to take today's rate and pass it into the future. This is handy if you need exchange rates in the weekend days but does not login during the weekend.

Provider Settings

Clicking the small button next to the Source combobox will bring up the Provider Settings screen, which looks like this:

Provider Settings

Retrieval Method: Via Boyum Cloud (Recommended)

User Name:

OK

Cancel

Field	Description
Retrieval Method	This selection controls how the exchange rates will be retrieved, and has the following options: Via Boyum Cloud (Recommended): This option uses Boyum Cloud as a middleman between SAP and the exchange rate provider. This has the added benefit that if anything changes in the way the exchange rates need to be retrieved, selecting this option means you will automatically be covered by these changes and can continue to get exchange rates, without having to wait for an update to B1UP to fix the problem. NB: Please note that since this is a global service it will always consider the date of retrieval in UTC time should the provider URL be based on a rate Directly from provider: This option means that B1UP is communicating directly with the exchange rate provider.
User Name	Oanda only: Here you'll put your Oanda User Name that you use with your Oanda subscription.

Scheduling setup	
Field	Description
Schedule Option	If selected scheduling option is other than no scheduling, the selected scheduling option will update exchange rates based on the interval defined. the possible scheduling options are: - No scheduling - Server component (requires that the server component has been installed and configured).
Success email	If set an email will be send when the exchange rates are updated (Optional).
Error email	If an error occurs and email will be send to this email.
Server run time (24 h/7d)	The fields controls at what time of the day the import of exchange rates happens on the server.
Server day in the month to run (if monthly interval is selected)	This field determines what day of the month the import of exchange rates should take place (Only when Monthly interval of check is selected).
Always update exchange rates even if filled	Force the server component to always update the exchange rates even if already filled.
Do not set rates on user login (Only Server component)	If you enable this option, the add-on itself will never set the rates. Do this if you want to have the Server component to be the only trigger of new rates.

DATABASES THAT DO NOT FOLLOW THE ISO STANDARDS CAN USE THE CURRENCY WINDOW TO DEFINE WHAT THEIR CURRENCY SYMBOL RELATES TO IN THE CURRENCY DEFINITION WINDOW (ADMINISTRATION > SETUP > FINANCIALS > CURRENCIES).

The order of how the currency code determined is as follows:

- First ISO Currency Code is check and use if filled
- If no ISO Code, then we try the B1UP ISO Extender column and use if filled
- If neither ISO and B1UP ISO is filled Code is tried use

Should none of the above be correct the import will fail and you will get an error message that you should setup the codes. In that case set the ISO Currency code for faster performance.

Currencies - Setup											
#	Code	Currency	International Code	International Description	Handbook Name	English	English Handbook Name	ISO Currency Code	ISO (ISO) Extender		
1	USD	US Dollar	USD	US Dollar	100 Gang*****	4	USD	USD	USD		
2	CAD	Canadian Dollar	CAD	Canadian Dollar	Cad		Canadian Dollar	CAD	CAD		
3	MXN	Mexican Dollar	MXN	Mexican Dollar	Cad		Mexican Dollar	MXN	MXN		
4	EUR	Euro	EUR	Euro	Eur	Eur	Euro	EUR	EUR		
5	NOK	Norwegian Kroner	NOK	Norwegian Kroner	Eur	Eur	Norwegian Kroner	NOK	NOK		

A screenshot of a web form. It features a table with 10 columns and 10 rows. The first column is highlighted in yellow. Below the table, there is a row of buttons: '1st', '2nd', '3rd', '4th', '5th', '6th', '7th', '8th', '9th', and '10th'. The '3rd' button is highlighted in yellow. To the right of the table, there is a section with two columns labeled '1st checked' and '2nd'.
