Multi Button Configuration

[\[See a video of the features\]](#)

Among the different **Function Button** type you can choose in the configuration is a type called Multi Button. This type differs in functionality from the rest of the types in that instead of running a single functionality when the button is pressed, the button gives an option to define multiple different feature that can be chosen by the user.

When you make a button of type Multi-button then the Caption on the configuration is not used and you need to provide a Multi-button configuration instead.

Field	Description
Code	The code identifying the Function Button
Name	The name/description of the configuration (For internal identification - Not shown to the user)
Line - Caption	Here you define the caption of the each multi-button option.
Line - Function	Here you define the function of the option. The type you can choose from are the same as regular buttons with the exception of a few legacy options. Opportunity Quotation Order Delivery/Goods Receipt PO Return Invoice Credit note Activity Incoming payment Outgoing payment Service call Posting Periods Reconciliation Goods Receipt Goods Issue Inventory Transfer Last Price Report Special Price Discount Groups Aging Universal Function Do Nothing (B1 Validation Style)
Line - Universal Function	If you define your Multi buttons function to be Universal Function you must define the Universal Function to run here (like you can leave it blank)
