Base configuration

Item Placement Tool Base configuration

Default placement type

Relative Placement

OK Cancel

Default placement type defines how the placement of new items should be handled.

- Pixel Placement – Items are placed using Left / Top pixels
- Relative Placement – Items are placed in relation to an item

Pixel placement has a small performance boost compared to relative placement so for max performance pixel placement should be used.

Relative placement has built in support for multiple different font-sizes and screen changes when SAP Business One is upgraded. For the best compattibility between SAP Business One versions/font-size Relative Placement should be used.
