Form-Settings Manager

[Previous](#) | [Next](#) | [Direct link to this topic](#)

One of the great features of SAP Business One is that each user can have his/her own style of windows when it comes to columns in line-level structures (Example: what columns to show in an A/R Invoice). This is however difficult to maintain and is the reason for this tool. Please note that as of SBO2007A SP01, SAP is also providing similar functionality (new button in the User-management window; see SAP note 1369613 for more) but we extend their functionality in the following places:

- Option to apply form-settings to only specific windows instead of all.
- Option to Import/Export form-settings from one database to another.
- Use XML as templates for form-settings.

When opening the form-settings manager you will be presented with following window.

The screenshot shows the 'Form Settings Manager' window with two steps. Step 1, 'Source (Where to copy from)', has 'Existing user' selected. A list of form types is shown with checkboxes: 302 (Financials > Journal Entry), 303 (Financials > Journal Voucher Entry), 123 (Financials > Journal Vouchers), 800 (Financials > Posting Templates), 75 (Financials > Reverse Transactions), 120 (Sales Opportunities > Opportunity), 179 (Sales A/R > A/R Credit Memo), 60300 (Sales A/R > A/R Down Payment Invoice), 60306 (Sales A/R > A/R Down Payment Request), 133 (Sales A/R > A/R Invoice), 60091 (Sales A/R > A/R Reserve Invoice), and 140 (Sales A/R > Delivery). Step 2, 'Target (Where to copy to)', has 'Selected users' selected. A list of users is shown with checkboxes: Albrecht, Alex Torres, Bill, Bill Leavine, Bob Shone, Brad Thompson, Carlos Andres, and Christine Rolland. A red note at the bottom states: 'NB: Users copied to need to be logged out in order to take effect'.

Using the tool consists of 3 steps:

Step 1: Select where to copy from

First you need to choose the source of where you wish to get the form-settings. You can either select an xml folder (Exported files from another database) or choose one of the existing users in the currently logged in database. If you choose an existing user, you get the option to decide which windows (Form Types) to include.

Step 2: Select where to copy to

Once the source is selected you need to provide your target, which are either other users in the database (check the user you wish to have the settings) or to an XML-folder for import into another database (click the "..." button and define a folder for where to save the form-settings).

Step 3: Execute selection

NB: DUE TO THE NATURE OF HOW SAP SAVES FORM-SETTINGS (ON/OUT OF THE SAP BUSINESS ONE APPLICATION, IT IS IMPORTANT THAT THE USERS SELECTED AS TARGET IS LOGGED OUT OF SAP BUSINESS ONE WHILE THE COPY HAPPENS IF NOT THE CHANGES MIGHT BE DISCARDED)

Once the above selections are done you can press Execute and after confirmation of your selection begin to copy the form-settings.

This screenshot is similar to the previous one but shows a 'System Message' dialog box in the foreground. The message asks: 'Are you sure you wish to continue? (This can take several minutes)'. It has 'Yes' and 'No' buttons. A red arrow points from the 'Yes' button to the 'Execute' button in the background window. The background window shows 'Doris Labour' selected as the source and a list of users as the target, including Doris Willy, Doris Brown, Doris Labour, Ella Mearns, Emily Irwin, Fred Buyer, George Keung, Hunter O'Leary, and James Chen. A red note at the bottom states: 'NB: Users copied to need to be logged out in order to take effect'.

In this sample we export all form-settings from Doris Labour and copy them to Fred Buyer.

After you confirm the selection the copy takes place and finally presents you with the following screen.

The screenshot shows a 'System Message' dialog box with the text 'Copy complete' and an 'OK' button.
