Auto City names

[Previous](#) | [Next](#) | [Direct link to this topic](#)

[\[See a video of the feature\]](#)

Checking this functionality will allow the system to automatically find the city to a specific zip-code of a specific county on a business partner and address component window. Currently, auto city names are available for addresses with the following countries:

- Denmark
- Norway
- France
- Czech Republic
- Slovakia

The system will for all other countries check if the supplied zip code already exists in the database, and the either insert the city, tell our that no matching zip code exists, or if there are more than one city associated with the supplied zip code give you the option to double click the city field and select the city you want to use.
